Manual

This is a manual which allows to use a tool which can classify bug reports

The last two cell contain the code for the tools first one is multinomial and the second one is the decision tree with the imported libraries to make it easier only thing that must be inserted is dataset with a specific path name which is /kaggle/input/datasetise and you must use Kaggle for the code to work.
what is outputted is the files as "Classified_yourdatasetname" for multinomial and "ClassifiedDT_yourdatasetname" for Decision tree the tool is fairly automatic and will also give you the performance metrics of your dataset of your datasets.
